

# Seizures

When was the first event observed?

How many total events have you witnessed and when did these occur?

How long do the events typically last? *(Please list a range if they vary considerably in length)*

Do you feel you have identified anything that may trigger these events?

Please describe what your pet does during these events:

Was your pet acting unusual prior to the actual event/did you feel you could tell something was about to occur?

What did your pet do immediately after the event and how long did they take to fully return to normal?

What, if any, medications is your pet on?

Has your pet had any known or suspected toxin exposure? If so, what?

Does your pet have any other health concerns?
